kill pid kill process id pid

killall proc kill all processes named proc *

bg lists stopped or background jobs; resume a

stopped job in the background

Brings the most recent job to the foreground fg

brings job a to the foreground

File Permissions

chmod octal file

fg a

change the permissions of file to octal, which can be found separately for user, aroup, and world by adding:

- 4 read (r)
- 2 write (w)
- 1 execute (x)

Examples:

chmod 777 - read, write, execute for all chmod 755 - rwx for owner, rx for group and world. For more options, see man chmod.

SSH

ssh user@host ssh -p port user@host ssh-copy-id user@host connect to host as user connect to host on port port as user add your key to host for user to enable a keyed or passwordless login

Searching

grep pattern files grep -r pattern dir locate file

search for pattern in files search recursively for pattern in dir command | grep pattern | search for pattern in the output of command | locate file | find all instances of file

System Info

date cal uptime

whoami finger user uname -a cat /proc /cpuinfo

cat /proc /meminfo man command

df du

free whereis app which app

show the current date and time show this month's calendar show current uptime display who is online who you are logged in as display information about user show kernel information cpu information memory information

show the manual for command

show disk usage

show directory space usage show memory and swap usage show possible locations of app show which app will be run by default

Compression

tar cf file.tar files tar xf file.tar tar czf file.tar.gz files tar xzf file.tar.gz tar cjf file.tar.bz2 tar xjf file.tar.bz2 gzip file gzip -d file.gz

create a tar named file.tar containing files extract the files from file.tar create a tar with Gzip compression extract a tar using Gzip create a tar with Bzip2 compression extract a tar using Bzip2 compresses file and renames it to file.gz decompresses file.gz back to file

Network

ping host whois domain dig domain dig -x host wget file waet -c file

ping host and output results get whois information for domain get DNS information for domain reverse lookup host download file continue a stopped download

Installation

Install from source:

./configure make make install dpkg -i pkg.deb rpm -Uvh pkg.rpm

Ctrl+R

!!

exit

install a package (Debian) install a package (RPM)

Shortcuts
